

PHARMACEUTICAL/COSMETIC COMPOSITIONS
COMPRISING THE LYSINE-D-PROLINE-VALINE TRIPEPTIDE

ABSTRACT OF THE DISCLOSURE

Pharmaceutical/cosmetic compositions
5 comprising a therapeutically effective amount of at
least one peptide containing the lysine-proline-valine
tripeptide sequence, the proline moiety of which
existing in its dextrorotatory optical isomer form
(DPro), or functional biological equivalent thereof, are
10 well suited for the treatment of inflammation disease
states afflicting a mammalian subject.
